AutoCAD mobile app. Image Credit: Autodesk AutoCAD Classic (AC) Since its inception, AutoCAD has been the market leader in the category of CAD software for architects, engineers, and drafters. AutoCAD Classic (AC) is a desktop computer-aided design (CAD) software application. It was developed by George E. McKibben, an architectural student at the Massachusetts Institute of Technology (MIT), and was first released in 1985 as a software for the MIT PDP-10 computer. AutoCAD, originally known as AutoCAD Classic, was the first product of its kind to be marketed in a standalone package, to be used as an independent CAD software application that did not depend on a mainframe. Prior to the introduction of AutoCAD, most CAD packages, such as CADD, had either been based on the mainframe, or were set up to be run on a separate microcomputer graphics terminal. AutoCAD is available in several different versions depending on the computer being used. Version 17.0 of AutoCAD Classic, released in October 2006, was the last release of version 17 of the software. The version number indicates the year the software was released. The software itself is available free of charge for download, but certain upgrades require payment of a licensing fee. Although AC has some similarities with the now discontinued "AutoCAD LT" software, the software in which LT was based, AC is actually a separate entity that requires a separate license and usage fees. The most recent version of AC is version 18.1. AutoCAD LT AutoCAD LT is a desktop computer-aided design (CAD) software application. It was first released by Autodesk in 1996. In contrast to AC, LT is not a separate product. Instead, LT is the name of the classic product that was renamed AutoCAD LT when it was first released in 1996. LT was originally released for the 32-bit Windows platform. It has since been made available for other operating systems such as Mac OS, Linux, and Solaris. Both LT and AC are currently being developed for the Windows 10 platform. The LT software runs on Windows 10, and is available for download from the Autodesk website. Jacob Kelley, 24, was sentenced to 30 days in prison on Friday after federal authorities found he had sold up to 2,000 cannabis cigarettes a month in the last year. A joint probe by the Alcohol, Tobacco and Firearms and Homeland Security Investigations found that Kelley was offering the street name Sour Diesel as a strain for just under $100 per quarter-ounce, according to the U.S. Attorney's Office in Cincinnati. Sour Diesel is a hybrid strain that is high in THC and low in CBD. It's well known in the weed trade for producing a powerful, mind-altering high. Kelley allegedly sold up to 2,000 cigarette packs a month of the Sour Diesel strain, which can sell for as much as $20 per pack in some areas, prosecutors said. The total potential amount of marijuana sold in the scheme is about 70,000 packages or $1.4 million, according to the U.S. Attorney's Office. a1d647c40b
