Slots Till You Drop: Swords and Sandals - The sequel to the game with the same name has been released and you can grab it. How to present your first demo without being annoying, like other people Every software developer must have their first real customer, who will take one to one or more functional or technical requirements, proposals, and present them to management or to a client. At this point, it is also important to have a demo that works for both technical and business users so that you can be convincing in your next proposal. When you present your first demo, avoid the following mistakes: Do not get carried away with it This is one of the first mistakes that you will make. You can become a bit desperate to finally show your app in action and it could end up taking a turn to become embarrassing to all parties involved. Is it just you who can make your first demo? Demonstration doesn't necessarily mean that your software will be available to the world. The most useful thing is to know that your functional and technical requirements for this first demo have to do with the real needs of the audience, not with your needs. Sit comfortably and be confident Everything will work if you make the effort, but it's more comfortable when you are confident. If you are talking to an audience, they are not used to your gestures or interactions. They do not know how you interact with your mobile phone or your keyboard, so they won't be expecting you to do the same. Think before you talk Try to predict what will happen if something will happen during the demo. This will make you very confident. Chances are the worst that will happen is that the customer will say that it's cool. Manage your expectations You won't have access to any new tricks with this first demo. The only thing that you can say is that this demo is representative of your final product. Even with some extra pressure, be polite and remember to be professional. Practice beforehand Don't rely on your first demo. This demo must not be the best, the one with the most advanced user interface or the one that

The present invention relates to an image processing system for a printer and a scanner and, more particularly, to a technique effectively applicable to an image processing system for a printer and a scanner, which stores read image data and image data read by a scanner into a recording medium such as a flash memory (FE (Flash EPROM) or EEPROM) of a memory card. Recently, scanners

are widely spread and become popular, and scanners are connected to personal computers and workstations to be used as image processing devices, respectively. Further, in the field of documents, a printer, serving as a scanner, is widely used as a companion device of a copier, replacing an original document scanning device.

This printer includes not only a copying function, but also image data reading function. However, since the memory capacity of a conventional small capacity memory card is small, the image data may possibly overflow when the memory card is used as a memory media to store image data. Further, reading the image data from the memory card is also accompanied with a problem. That is, when the amount of image data exceeds the capacity
